Evening Brief

Date: July 22nd, 2021

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 17 fires for 21.7 acres / 6,316 acres Large Fire Growth

Weather Summary:

... Wetter Thunderstorms Over the Southern and Eastern Half of the Great Basin Diminishing through the Week ...

... Drier Air and Breezy Winds Returns to Western and Northern Nevada, Idaho and Wyoming Later this Week ...

High pressure will remain over the Great Basin this week with warming temperatures and smoky conditions continuing in the north and west. Drier air moves into Western Nevada and much of Idaho today pushing the remnants of the monsoonal thunderstorms into the eastern half of the Great Basin, mainly across Utah. Thunderstorms will diminish into the weekend, except for far southern and eastern areas.

Northwest winds will also pick up again across southern Idaho into parts of Utah with gusts 25-30 mph the next 2 days, which will increase the likelihood of holdovers. Humidity will drop each day through the weekend.

Over the weekend, hot and dry conditions will continue in the northern half of the Great Basin, with RH dropping back into the teens and even some single digits in the valleys. Poor overnight RH recoveries are expected through the weekend as well. Monsoonal moisture will wrap around into southern and western areas of Nevada early next week, pushing into the drier areas of Idaho by midweek, and will need to be watched.

Fuels/Fire Potential:

... Fuels and Fire Behavior Advisory in effect for Idaho, and Northern Portions of Both Utah and Nevada...

Fire danger indices dropped slightly in Idaho due to recent precipitation and prolonged increases in humidity...but remain above the 80th percentile in most areas across the northern half of the Great Basin. However, indices will climb right back up Friday through the weekend in northern, western, and central areas with the drier air moving in. The warmer, drier, and breezy conditions the next few days will have a good potential to stir up existing fires, as well as new holdovers across Northern portions of Nevada and Utah, into all of Idaho and Wyoming.

Fuels in the southern third of the Great Basin have moistened significantly in most areas, with continued moistening in the coming days...with minimal large fire potential for the time being.

Resources:

Aviation within the Great Basin

- o 0 VLAT, 4 LATs, 0 CL-415
- o 27 SEATs, 2 FB, 11 AA, 0 ASM, 2 LP
- o 11 Type 1 Helicopters / 11 Comm.
